Dear Coronet Blockchain

RE: Letter of Support for the application to the MIT Solve 2022 GLOBAL CHALLENGES initiative

The Wits Health HUBB recognizes Coronet Blockchain as a significant player in the development and rollout of blockchain technology for underserved sectors of the African economy. Furthermore, we recognize the impact this company has in the global “tech for good” movement.

We support the application submitted to the MIT Solve 2022 GLOBAL CHALLENGES initiative titled “Impilo Blockchain”. The Wits Health HUBB will provide scientific research, mentorship and advocacy support with its public health sector network towards the successful implementation of this project.

The project will deliver much needed access to health information for those affected by systemic issues that result in a lack of access to patient records. We believe the health behavior change requires patients to have access to credible information about their health.

Kind Regards

A handwritten signature in black ink, consisting of a stylized, fluid script that appears to read "Lethu Kapueja".
